EDUCATION

Bachelor of Engineering

PUNE INSTITUTE OF COMPUTER TECHNOLOGY · Pune, India · 2025

Board of Intermediate Education

YASHVANTRAO CHAVAN INSTITUTE OF SCIENCE · Satara, India · 2021

Secondary School Certificate

NIRMALA CONVENT HIGHSCHOOL · Satara, India · 2019

SKILLS

Languages: C++

Front End: HTML, CSS, Tailwind-CSS, JavaScript, React.js

Back End: Node.js, Express.js

Course Work: Object Oriented Programming, DBMS

PROJECTS

Study Notion

- The Study Notion a comprehensive study platform developed with a fully functional frontend built using React and a backend powered by Express.js.
- · It includes robust authentication and authorization mechanisms using JWT (JSON Web Tokens).
- The platform caters to three types of users: students, instructors, and administrators, each with their respective login and signup capabilities. Users can log in, sign up, and access course materials while tracking their progress.
- This project offers a secure and feature-rich environment for online learning and management for both students and instructors, all backed by a MongoDB database and JWT-based security.

Razorpay Payment Application

- The Razorpay Payment Webpage Project a user-friendly payment solution designed with HTML, CSS, and JavaScript. It offers a streamlined interface for processing online payments efficiently.
- Users can input payment details, complete transactions, and enjoy a secure and straightforward payment experience. This project leverages the capabilities of HTML, CSS, and JavaScript to create a user-friendly webpage, facilitating easy and secure online payments through the Razorpay platform.

TextUtils

- The TextUtils a text converter built using React.js that allows users to manipulate text in various ways. It provides functionality to convert text to uppercase, lowercase, and potentially other forms such as title case or alternating case.
- Users can input their text, select the desired conversion option, and instantly see the transformed result on the screen. This React.js-based text converter provides a user-friendly interface for easy and quick text manipulation.

SUMMARY

Highly skilled and versatile Front-end Developer with a strong command of HTML, CSS and React.js coupled with Backend development using Node.js and Express.js

With a passion for creating seamless, user-friendly web applications, I have a proven track record of crafting visually appealing and responsive interfaces that enhance user engagement and satisfaction. My proficiency in React.js allows me to design and develop dynamic front-end solutions, leveraging state management, component-based architecture, and modern UI/UX principles.

In the realm of Back-end development, I excel in building robust and scalable server-side applications using Node.js.
